

BRIDGING GAPS

Fostering Connections

“True Sophistication is found in Simplicity”

PROBLEM

Deskless Workers, who make upto 80% of the Global workforce, face unique challenges that hinder their productivity and Job satisfaction. some challenges are

- **Lack of Flexibility**

they have rigid schedules, limited control over their working hours which leads to poor work life balance

- **Communication Barriers**

Deskless employees frequently lack direct access to effective communication channels with management and colleagues, resulting in feelings of isolation and disconnection

- **Health & Safety**

Deskless workers are more prone to health and safety risks due to the physical nature of their jobs.

- **Employee Engagement**

Deskless workers often feel disconnected from the company culture and goals due to their physical separation from the main office & limited interaction with colleagues. This lack of engagement leads to higher turnover rates & lower morale.

SOLUTION

- **Flexible Scheduling**

- **Access to the right Technology**

- **Improved communication tools, minimizing distractions**

- **Enhanced Health & Safety measures**

BRIEF INTRODUCTION

Our PTT technology enables instant voice transmission and multimedia communication with a push of a button.

**Seamlessly
share text**

Total Estimated Productivity Loss: ~ 270 K per 10-person team / y

Global Push-to-Talk Market

Rapidly expanding global opportunity for Verbo's AI-enabled PTT solution

Next Generation Push-to-Talk

Instant Communication

using push-to-talk
mobile phones/
radios

Cloud Native Solution

allows dynamic
worker grouping)
(function, location)
with AI assistance

Translate & Transcribe

Any voice
communication
instantly

Leveraging Cloud, 5G, and Artificial Intelligence to maximize Productivity

Business Model

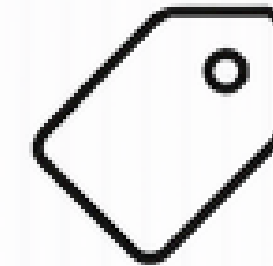

SaaS Solution

Subscription-based
model for
enterprise clients

Integrators & Carriers

Partnerships with
solution integrators
and telecoms to reach
enterprise customers

White Label Program

Enables resellers to
rebrand and distribute
Verbo's platform

Multi-channel growth through SaaS, partners, and resellers

Disruptors in the PTT Market

- Advanced Public and Private 5G Systems enable fast, encrypted voice communications with integrated data capabilities
- Public and Private Clouds allow secure managed system deployments
- Artificial Intelligence models can understand both voice and data in context
- Automations can enable high speed actions without requirement of dispatcher agents for repetitive or urgent tasks
- SaaS Models limit CAPEX Costs

Enhanced AI Features

Automatic Speaker Identification

- Identifies who is speaking, even in group or noisy environments
- Useful for security, auditing, and record-keeping

AI Summaries

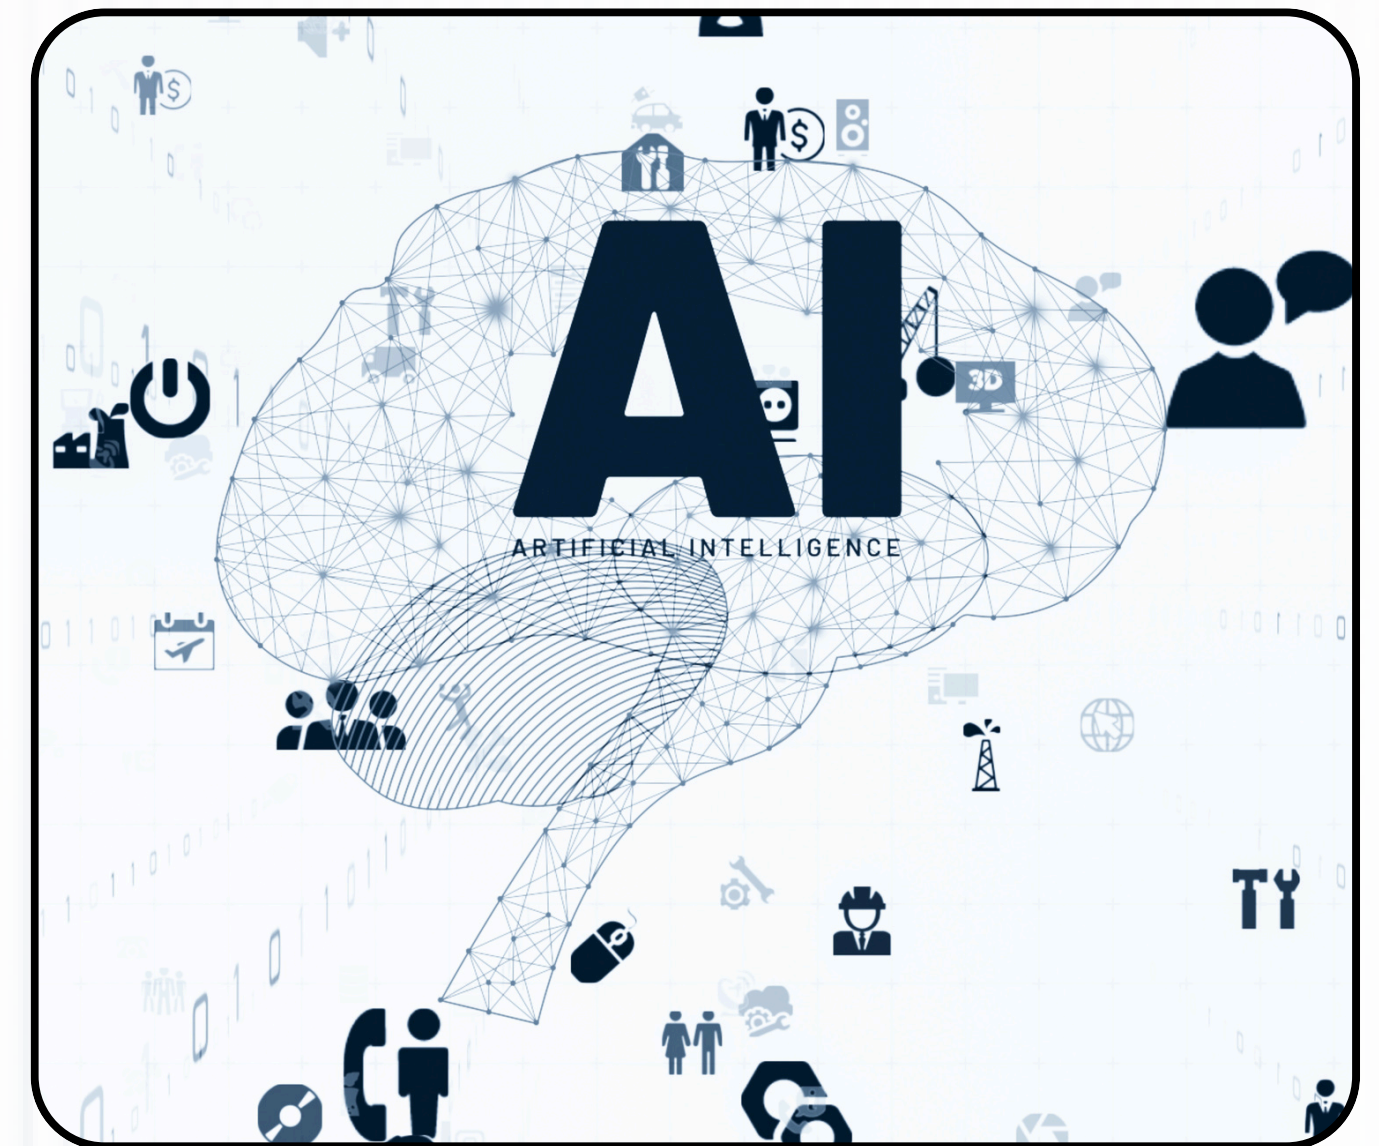

- Summarizes conversations or channel logs automatically
- Saves time on reporting and debriefing

Noise Cancellation & Audio Enhancement

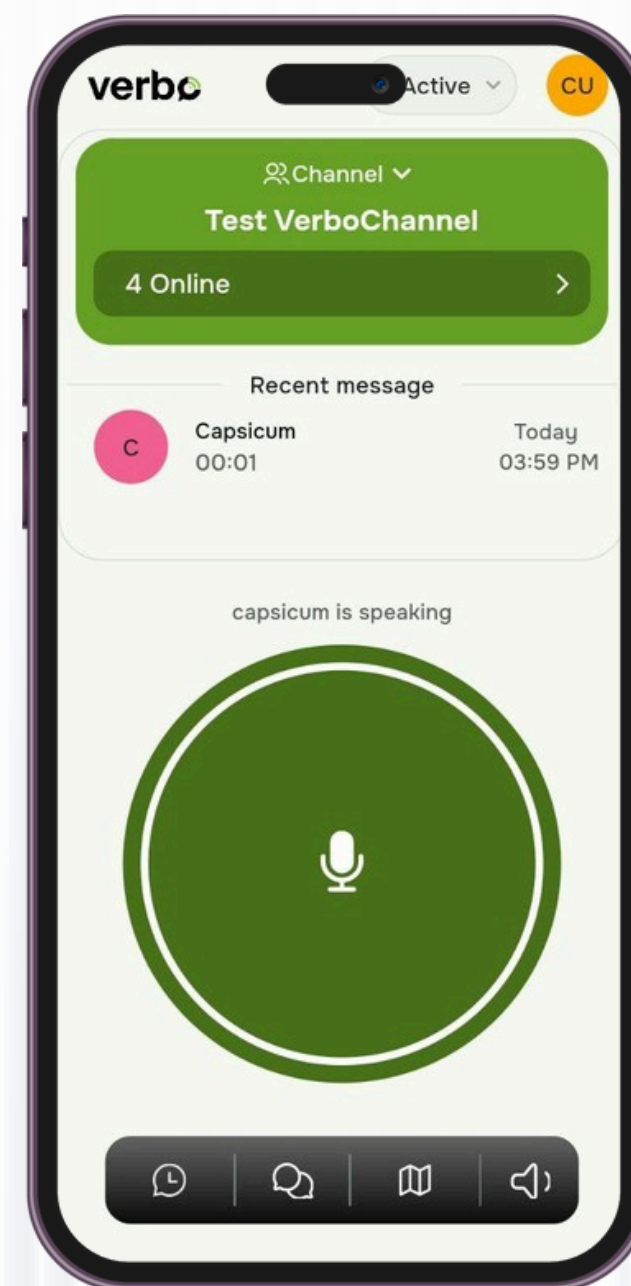

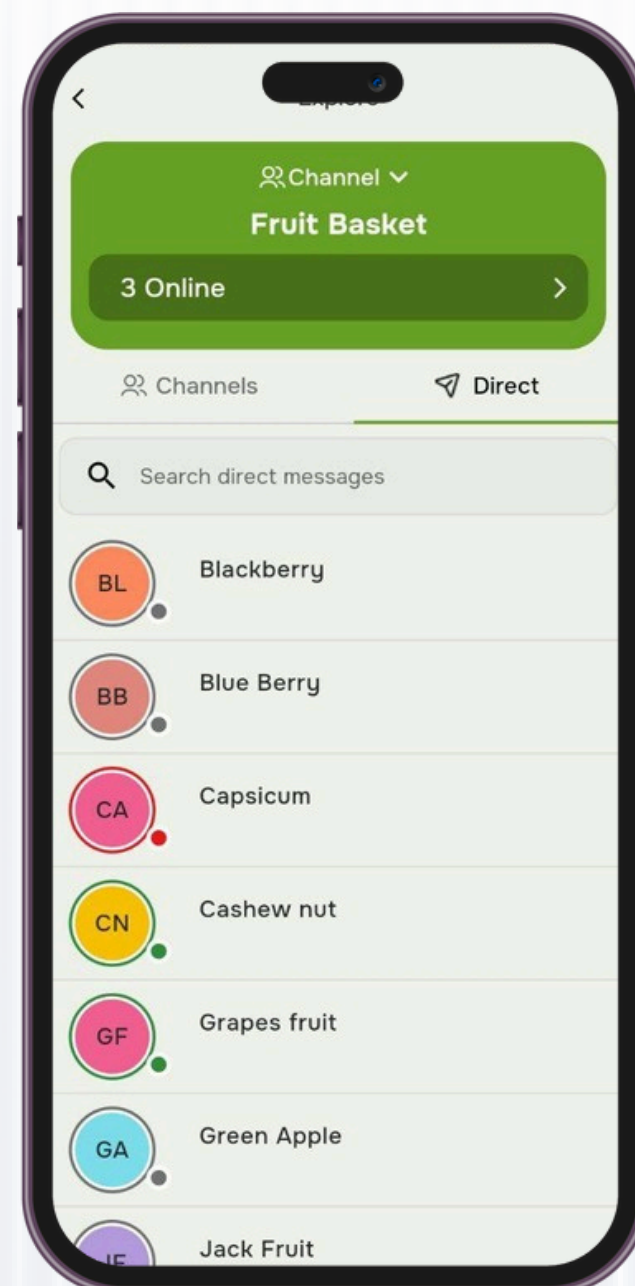

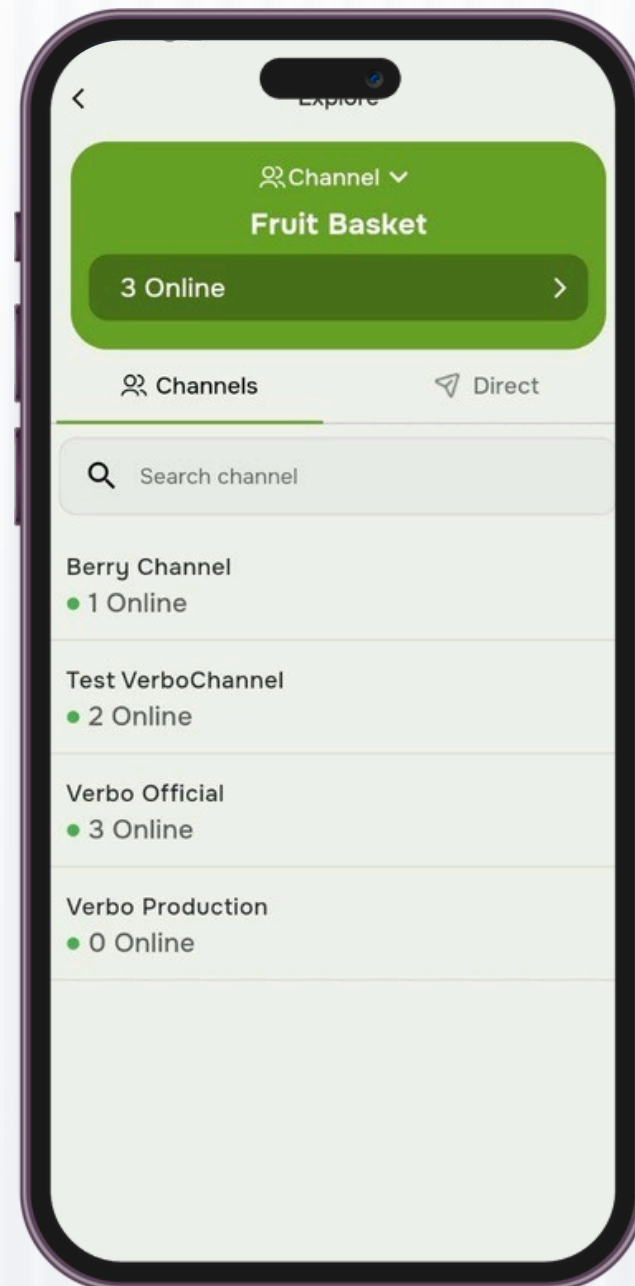

- Filters out ambient noise
- Improves clarity in loud environments (e.g., construction sites, emergency scenes)

AI-Powered Voice Commands

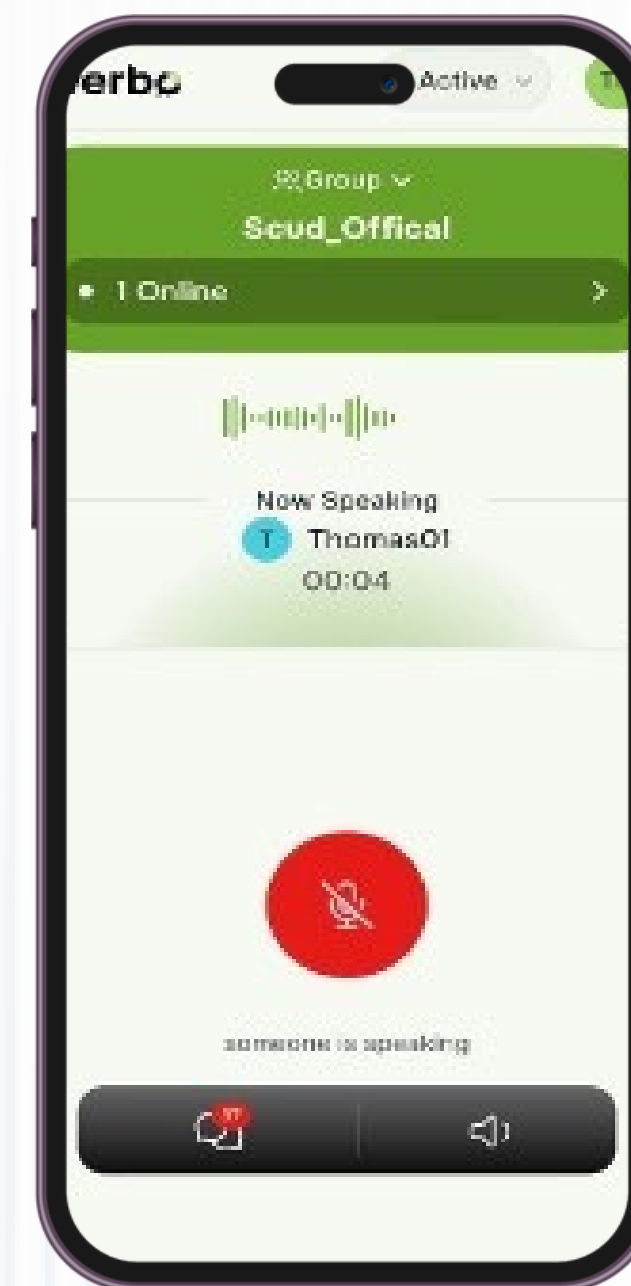

- Allows users to issue commands like “Start incident report” or “Send location”
- Reduces manual input and streamlines workflows
